DrupalTools

A list of popular **open source and free tools** that can help people accomplish **Drupal related tasks**.

ALL DRUPAL TOOLS

Acquia Coding Standards (PHP) (2019)

> Source: github.com/acquia/coding-standards-php
> Docs: github.com/acquia/coding-standards-php#readme
> Drupal: 9, 10

Description:

PHP_CodeSniffer rulesets that codify Acquia's Drupal coding standards for automated linting.

Requires: composer, php, phpcs

Category: coding-standards, linting, phpcs

✎ Edit

Acquia Dev Desktop (2015)

> Source: dev.acquia.com/downloads
> Docs: docs.acquia.com/dev-desktop
> Drupal: 7, 9

Description:

Acquia Dev Desktop is a free app that allows you to run and develop Drupal sites locally on your computer and optionally host them using Acquia Cloud. Use Acquia Dev Desktop to evaluate Drupal, add and test other Drupal modules, and develop sites while on a plane or away from an internet connection.

Requires: macos, windows

Category: deployment, development, testing

✎ Edit

Aegir (2007)

Source:	github.com/aegir-project
Docs:	docs.aegirproject.org
Drupal:	6, 7, 9

Description:

Aegir allows you to deploy and manage many Drupal sites, and can scale across multiple server clusters. Aegir makes it easy to install, upgrade, and backup an entire network of Drupal sites.

Requires: linux, own-server

Category: clustering, hosting, multisite, paas

✎ Edit

Amazee Silverback (2019)

Source:	github.com/AmazeeLabs/silverback
Drupal:	9

Description:

A composer package adding common project dependencies, tooling and configuration scaffolding to Amazee Drupal projects. It aims to improve product quality and reduce maintenance costs by encouraging three simple principles: Maximize open source, Minimize requirements, Testability first.

Requires: composer

Category: building, cli, deployment, deprecated, development, provisioning, scaffolding, testing

✎ Edit

drucker (2016)

Source:	github.com/anavarre/drucker
Docs:	github.com/anavarre/drucker
Drupal:	9

Description:

drucker is an opinionated Docker-based Drupal stack managed by Ansible for orchestration. It automates creating Debian containers on which it will deploy a common web stack to run Drupal applications.

Requires: ansible, docker

Category: debug, deprecated, development, docker, testing

✎ Edit

Ansible Deploy Drupal (2018)

Source: github.com/ChromaticHQ/ansible-deploy-drupal
Docs: github.com/ChromaticHQ/ansible-deploy-drupal#readme
Drupal: 9, 10

Description:

An Ansible role for deploying Drupal sites with repeatable tasks and configurable defaults.

Requires: ansible   Category: ansible, deployment, deprecated, devops

✎ Edit

Aquifer (2015)

Source: github.com/aquifer/aquifer
Docs: docs.aquifer.io
Drupal: 6, 7, 9

Description:

Aquifer is a command line interface that makes it easy to scaffold, build, test, and deploy your Drupal websites. It provides a default set of tools that allow you to develop, and build Drupal sites using the Drush-make workflow. In addition, Aquifer ships with an extensions system that allows you to add additional tools to your project.

Requires: drush, npm   Category: building, cli, deployment, deprecated, production, provisioning, testing

✎ Edit

Running Drupal on AWS (2017)

Source: github.com/aws-samples/aws-refarch-drupal
Drupal: 9

Description:

This reference architecture provides a set of YAML templates for deploying Drupal on AWS using Amazon VPC, Amazon EC2, Auto Scaling, Elastic Load Balancing (Application Load Balancer), Amazon RDS, Amazon ElastiCache, Amazon EFS, Amazon CloudFront, Amazon Route 53, Amazon ACM with AWS CloudFormation.

Requires: aws   Category: ci, deployment, deprecated, provisioning, scaffolding

✎ Edit

Azure Kubernetes Service Drupal8 (2019)

Source: github.com/snp-technologies/Azure-Kubernetes-Service-Drupal8
Drupal: 9

Description:

A solution for running Drupal 8+ workloads on Azure Kubernetes Service (AKS).

Requires: azure, docker, kubernetes

Category: azure, deployment, deprecated, docker

✎ Edit

BackUpScale Drupal Kubernetes Module (2025)

Source: gitlab.com/backupscale/drubernetes
Docs: gitlab.com/backupscale/drubernetes/-/tree/main?ref_type=heads
Drupal: 9, 10

Description:

A Terraform module that provisions production-ready Drupal workloads on Kubernetes with AWS integrations.

Requires: aws, kubernetes, terraform

Category: aws, infrastructure, kubernetes, provisioning

✎ Edit

Beetbox (2015)

Source: github.com/beetboxvm/beetbox
Docs: beetbox.readthedocs.io
Drupal: 7, 9

Description:

A VM for local L*MP development, built with Packer, Vagrant + Ansible. Beetbox is essentially a pre-provisioned version of Drupal VM mainly to speed up initial build time, but also to reduce the size of each VM by leveraging linked clones.

Requires: vagrant, virtualbox

Category: ansible, debug, deprecated, development, vagrant, vm

✎ Edit

Behat Drupal Extension (2012)

Source: github.com/jhedstrom/drupalextension
Docs: behat-drupal-extension.readthedocs.io
Drupal: 6, 7, 9

Description:

The Drupal Extension is an integration layer between Behat, Mink Extension, and Drupal. It provides step definitions for common testing scenarios specific to Drupal sites.

Requires: behat   **Category:** behat, testing

✎ Edit

Bitnami Docker for Drupal (2015)

Source: github.com/bitnami/bitnami-docker-drupal
Docs: github.com/bitnami/bitnami-docker-drupal
Drupal: 7, 9

Description:

Bitnami Docker Images for Drupal.

Requires: docker   Category: cli, debug, deprecated, development, docker, testing

✎ Edit

BLT (2014)

Source: github.com/acquia/blt
Docs: blt.readthedocs.io
Drupal: 9

Description:

BLT (Build and Launch Tool) is a tool that generates new Drupal projects using a standardized template derived from Acquia Professional Services' best practices.

Requires: composer, git **Category:** building, cli, deployment, production, provisioning, scaffolding, testing

✎ Edit

BOA (2013)

Source: github.com/omega8cc/boa
Docs: github.com/omega8cc/boa/tree/master/docs
Drupal: 6, 7, 9

Description:

BOA is an acronym of high performance Barracuda, Octopus and Aegir LEMP stack. Includes all-in-one bash scripts to install and upgrade high performance Aegir Hosting Systems for Drupal, with Nginx, PHP-FPM, Zend OPcache, MariaDB and Redis.

Requires: linux   **Category:** aegir, clustering, hosting, multisite, paas

✎ Edit

Boran docker-drupal (2014)

Source: github.com/Boran/docker-drupal
Drupal: 6, 7, 9

Description:

Completely automated Drupal install, with lots of flexibility! Creates a Docker container for Drupal 7 or 8, using Linux (Ubuntu 14.04), Apache and MySQL.

Requires: docker   Category: debug, deprecated, development, docker

✎ Edit

---

build.sh (2014)

Source: github.com/wunderkraut/build.sh
Docs: github.com/wunderkraut/build.sh/blob/master/README.md
Drupal: 9

Description:

build.sh is a tool for making, updating and managing Drupal installations from the development phase up to production.

Requires: drush   Category: building, cli, deployment, deprecated, production, provisioning, scaffolding, testing

✎ Edit

Capistrano Drupal Deploy (2015)

Source: github.com/capistrano/drupal-deploy
Drupal: 7

Description:

This gem provides a number of tasks which are useful for deploying Drupal 7 projects with Capistrano 3 and the help of drush. This is a short doc to help you deploy a drupal projet. To know more about capistrano read their documentation on Capistrano 3.

Requires: ruby   Category: cli, deployment, deprecated, development

✎ Edit

---

ci-tests (2018)

Source: bitbucket.org/mediacurrent/ci-tests/src/master/
Drupal: 7, 9

Description:

Scripts helpful for testing a Drupal site on a Continuous-Integration server, or locally.

Requires: behat, composer, phpcb, phpcs, phpunit

Category: ci, development, testing

✎ Edit

CiBox (2014)

Source: github.com/cibox/cibox
Docs: docs.cibox.tools
Drupal: 6, 7, 9

Description:

Continuous Integration Server that automatically generates builds for every commit in a Pull Request on GitHub (private repositories supported). Multi CMS/CMF support to create projects from scratch in seconds.

Requires: ansible, vagrant, virtualbox

Category: ci, debug, deprecated, testing

✎ Edit

CIKit (2016)

Source:	github.com/BR0kEN-/cikit
Docs:	github.com/BR0kEN-/cikit
Drupal:	7, 9

Description:

Ansible-based system for building environments for local development and continuous integration that ships as an extensible package. Base any framework or CMS you want on CIKit and build your own CI workflow if necessary.

Requires: ansible, vagrant, virtualbox

Category: ansible, ci, deprecated, docker, jenkins, vagrant, virtualbox

✎ Edit

CMSeeK (2017)

Source:	github.com/Tuhinshubhra/CMSeeK
Drupal:	6, 7, 9

Description:

CMS Detection and Exploitation suite - Scan WordPress, Joomla, Drupal and over 180 other CMSs

Requires: python

Category: bruteforce, deprecated, security, testing

✎ Edit

CMSScan (2018)

Source:	github.com/ajinabraham/CMSScan
Drupal:	6, 7, 9

Description:

CMSScan provides a centralized Security Dashboard for CMS Security scans. It is powered by wpscan, droopescan, vbscan and joomscan. It supports both on demand and scheduled scans and has the ability to sent email reports.

Requires: python

Category: bruteforce, deprecated, security, testing

✎ Edit

Coding standards php (2018)

Source: github.com/acquia/coding-standards-php
Drupal: 9

Description:

Acquia Coding Standards for PHP is a collection of PHP_CodeSniffer rules (sniffs) for Acquia coding standards for PHP projects, including Drupal extensions.

Requires: composer, phpcs

Category: coding-standards, guality-check, phpcs, testing

✎ Edit

Composer Drupal Lenient (2022)

Source: github.com/mglaman/composer-drupal-lenient
Docs: github.com/mglaman/composer-drupal-lenient
Drupal: 9, 10

Description:

The Drupal community introduced a lenient Composer facade that modified the drupal/core constraint for packages. This was done to remove a barrier with getting extensions installed via Composer to work on making modules Drupal 9+ ready.

Requires: cli, composer **Category:** cli, debug, development, scaffolding

✎ Edit

Optimize Composer for Drupal projects (2018)

Source: github.com/zaporylie/composer-drupal-optimizations
Drupal: 9

Description:

This composer-plugin contains a set of improvements that makes running heavy duty composer commands (i.e. composer update or composer require) much faster.

Requires: composer   Category: cli, deprecated, development

✎ Edit

Composerize Drupal (2018)

Source: github.com/grasmash/composerize-drupal
Drupal: 9

Description:

Convert a non-Composer-managed Drupal application (e.g., one created via tarball) to a Composer-managed Drupal application.

Requires: composer   Category: cli, deprecated, development

✎ Edit

Contrib Kanban (2015)

Source: github.com/mglaman/contribkanban.com
Docs: github.com/mglaman/contribkanban.com#readme
Drupal: 7, 9, 10

Description:

Turns Drupal.org issue queues into kanban boards to help maintainers visualize work in progress.

Requires: http   **Category:** drupalorg, maintainers, workflow

✎ Edit

---

d8githooks (2013)

Source: github.com/alexpott/d8githooks
Drupal: 9

Description:

Drupal core committer git hooks project performs automated checks (e.g. file permissions, PHP/CSS/JS coding standards) before/after performing a commit, to ensure regressions are not accidentally committed.

Requires: composer, eslint, git, nodejs, yarn   **Category:** cli, development, drupal-core, precommit

✎ Edit

Dash (2020)

Source:	github.com/kod-camp/dash
Docs:	github.com/kod-camp/dash
Drupal:	9

Description:

An opinionated project template to spin up Drupal projects in a dash.

Requires: composer   Category: deprecated, development, scaffolding

✎ Edit

Dcycle Drupal Starterkit (2018)

Source:	github.com/dcycle/starterkit-drupalsite
Docs:	github.com/dcycle/starterkit-drupalsite#readme
Drupal:	9, 10

Description:

A Drupal starter kit with Docker-based local environments, deployment scripts, and best-practice documentation.

Requires: composer, docker, docker-compose   **Category:** development, devops, docker, scaffolding

✎ Edit

Drupal Docker Environment (2016)

Source:	github.com/activelamp/generator-drupalal
Drupal:	7, 9

Description:

Yeoman generator for building Drupal sites.

Requires: yeoman   Category: deprecated, development, generator, npm, scaffolding

✎ Edit

DDEV (2016)

Source: github.com/drud/ddev
Docs: ddev.readthedocs.io
Drupal: 7, 9, 10

Description:

DDEV is an open source tool that makes it dead simple to get local PHP development environments up and running within minutes. It's powerful and flexible as a result of its per-project environment configurations, which can be extended, version controlled, and shared. In short, DDEV aims to allow development teams to use Docker in their workflow without the complexities of bespoke configuration. Pluggable hosting providers with current support for Acquia, Pantheon, Platform.sh and more.

Requires: docker   **Category:** development, docker, multisite, workflow

✎ Edit

Deployer (2013)

Source: github.com/deployphp/deployer
Docs: deployer.org/docs
Drupal: 6, 7, 9

Description:

Deployment tool for PHP.

Requires: php   **Category:** cli, deployment, testing

✎ Edit

Deployotron (2013)

Source: github.com/reload/deployotron
Docs: github.com/reload/deployotron
Drupal: 6, 7, 9

Description:

Deployotron is a Drush command to simplify deploying new code to a Drupal site. There's already a lot of ways to deploy ones Drupal site, from FTPing up the files to having Capistrano deploy the site when the build passes in Jenkins. Deployotron aims to be simple to use, but also usable as a part of a bigger setup.

Requires: drush, git   Category: building, cli, deployment, deprecated, provisioning, testing

✎ Edit

devilbox (2016)

Source: github.com/cytopia/devilbox
Docs: devilbox.readthedocs.io/en/latest
Drupal: 6, 7, 9

Description:

The Devilbox is a modern and highly customisable dockerized PHP stack supporting full LAMP and MEAN and running on all major platforms. The main goal is to easily switch and combine any version required for local development.

Requires: docker   Category: deprecated, development, docker, gui, testing

✎ Edit

---

dgo.to (2022)

Source: www.drupal.org/project/dgore
Docs: dgo.to
Drupal: 6, 7, 9, 10

Description:

This is a simple url shortener for drupal.org pages according to https://www.drupal.org/project/dgore.

Requires: http   **Category:** cli, tools

✎ Edit

Drupal Distros (2017)

Source: github.com/theodorosploumis/drupal-docker-distros
Docs: github.com/theodorosploumis/drupal-docker-distros
Drupal: 7, 9, 10

Description:

An online saas to run try - within seconds - several popular Drupal 8.x and 7.x distributions within LAMP stack using Docker.

Requires: docker   Category: debug, deprecated, development, docker, testing

✎ Edit

---

dminca drupal-docker (2015)

Source: github.com/dminca/drupal-docker
Drupal: 9

Description:

Drupal 8.x on Alpine Linux Docker with Nginx, PHP7 and PostgreSQL.

Requires: docker, make Category: cli, debug, deprecated, development, docker

✎ Edit

Docker Drupal Project (2017)

Source: gitlab.com/florenttorregrosa-drupal/docker-drupal-project
Docs: gitlab.com/florenttorregrosa-drupal/docker-drupal-project
Drupal: 9

Description:

A Drupal project template with Docker environment and Gitlab CI.

Requires: cli, docker, gitlab, traefik

Category: cd, ci, deployment, devops

✎ Edit

docker4drupal (2016)

Source: github.com/wodby/docker4drupal
Docs: docker4drupal.readthedocs.io
Drupal: 6, 7, 9, 10

Description:

Docker4Drupal is a set of docker containers optimized for Drupal. Use docker-compose.yml file from docker4drupal repository to spin up local environment on Linux, Mac OS X and Windows.

Requires: docker   **Category:** development, docker, testing

✎ Edit

Dockerized drupal starter (2017)

Source: github.com/LevInteractive/dockerized-drupal-starter
Drupal: 9

Description:

End-to-end (CI + CD) dockerized Drupal 8 starting point.

Requires: docker   Category: cd, ci, deprecated, development, docker, testing

✎ Edit

---

docksal (2015)

Source: github.com/docksal/docksal
Docs: docksal.readthedocs.io
Drupal: 7, 9

Description:

Docker and Docker Compose based environments for web development for macOS, Windows and Ubuntu.

Requires: docker   **Category:** apache solr, behat, blackfire, debug, development, varnish, docker

✎ Edit

---

dockstack (2016)

Source: github.com/ten7/dockstack
Drupal: 6, 7, 9

Description:

TEN7's dockstack is a library of containers for local Drupal development. Instead of a single 'stack to rule them all', dockstack provides a mix-and-match approach to suit your development needs.

Requires: docker   Category: cli, deprecated, development, docker

✎ Edit

doGit (2021)

Source: github.com/dpi/dogit
Drupal: 9

Description:

Drupal.org + Git CLI application. doGit assists in making the transition to merge requests, and general Git operations, easier for Drupal developers.

Requires: composer, git **Category:** building, maintainers, testing

✎ Edit

dorgflow (2016)

Source: github.com/joachim-n/dorgflow
Drupal: 7, 9

Description:

Dorgflow is a set of commands that streamline your work with patches for issues on drupal.org. With Dorgflow, you don't need to download and apply patches, and creating patches and interdiffs is simplified. The only thing that Dorgflow doesn't handle is posting your files back to an issue for review.

Requires: cli, composer, git **Category:** cli, development, drupalorg

✎ Edit

Drainpipe (2021)

Source: github.com/Lullabot/drainpipe
Docs: github.com/Lullabot/drainpipe
Drupal: 9

Description:

Drainpipe is a composer package which provides a number of build tool helpers for a Drupal site, including: 1) Site and database updates, 2) Artifact packaging for deployment to a hosting provider, 3) Automated testing setup with support for PHPUnit and Nightwatch tests

Requires: composer, npm **Category:** cd, ci, deployment, development, devops, testing

✎ Edit

Drall (2022)

Source: github.com/jigarius/drall
Docs: github.com/jigarius/drall#readme
Drupal: 7, 9, 10

Description:

Runs Drush commands across multi-site Drupal installations from a single CLI wrapper.

Requires: cli, drush, php

Category: cli, drush, multisite

✎ Edit

Drec - Drupal 8 Commands (2016)

Source: github.com/theodorosploumis/drec
Drupal: 9

Description:

A collection of basic bash scripts that work together to accomplish common development tasks for Drupal 8.x projects. You could probably use drec locally or on a development environment and not on a production server.

Requires: cli

Category: cli, debug, deprecated, development

✎ Edit

drocker (2015)

Source: github.com/gabesullice/drocker
Docs: github.com/gabesullice/drocker
Drupal: 7, 9

Description:

Drocker is a collection of command-line tools and Docker images for developing and running containerized Drupal sites. Its philosophy is minimalistic and bare-bones. Drocker tries its best to get out of your way. Just making the tedious things simpler.

Requires: docker

Category: cli, debug, deprecated, development, docker, testing

✎ Edit

droopescan (2014)

Source: github.com/droope/droopescan
Drupal: 7, 9

Description:

A plugin-based scanner that aids security researchers in identifying issues with several CMSs, mainly Drupal & Silverstripe.

Requires: python   **Category:** development, security

✎ Edit

Dropcat (2016)

Source: gitlab.wklive.net/wk-public/dropcat
Docs: gitlab.wklive.net/wk-public/dropcat
Drupal: 9

Description:

Dropcat is a new deployment tool, mainly for Drupal that is developed by Wunderkraut in Sweden.

Requires: drush, symfony   Category: building, cli, deployment, deprecated, jenkins, provisioning, testing

✎ Edit

Drop Fabrik (2017)

Source: github.com/adminteractive/drupalstack
Drupal: 9

Description:

Drop Fabrik is configuration of Docker to help development more speedy for Drupal. You can choose 4 configration according to amount of resource in your machine, and will be able to build a Drupal environment on Docker in 5 to 10 minutes with the following steps. And you can also deploy the extactly same environment to the cloud service such as AWS.

Requires: docker   Category: deprecated, development, docker, testing

✎ Edit

---

dropwhale (2014)

Source:	github.com/socketwench/dropwhale
Drupal:	9

Description:

Dropwhale is a drop-in Docker environment aimed at Drupal module developers. Instead of maintaining a separate Drupal installation, Dropwhale does all the downloading and initialization of Drupal with a few easy commands. No need for you to download and install core. No need to argue with xdebug or get Drush installed. It's all built in!

Requires: docker   Category: debug, deprecated, development, docker

✎ Edit

Druact (2017)

Source:	github.com/gnikolovski/druact
Drupal:	9

Description:

Drupal 8/9 + ReactJS + Bootstrap 4. Frontend stuff for https://github.com/gnikolovski/druact_api project

Requires: drupal, npm, reactjs

Category: cms, frontend, js

✎ Edit

Drubs (2015)

Source:	github.com/komlenic/drubs
Docs:	github.com/komlenic/drubs/tree/master/docs
Drupal:	9

Description:

Drubs (short for 'Drupal Build System') is a command-line tool for building, deploying, and managing Drupal sites across multiple servers and environments such as development, testing, staging, and production.

Requires: drush, git   Category: building, cli, deployment, deprecated, production, provisioning, testing

✎ Edit

Drubuild (2017)

Source:	github.com/fubarhouse/drubuild
Docs:	github.com/fubarhouse/drubuild
Drupal:	7, 9

Description:

Drubuild is a command-line application which builds and manages sites via some common composer and drush commands. This application was born of the personal desire of the creator to be a useful tool for CI and automation to be used at work, however the stability and reliability was a catalyst for a lot of work here.

Requires: go   Category: cli, deprecated, development, scaffolding, vm

✎ Edit

Drucker (2017)

Source:	github.com/ovh/drucker
Docs:	ovh.github.io/drucker
Drupal:	9

Description:

Drucker is a lightweight Drupal developer environment. It contains required tools, like Drush or Composer, without useless extra. The goals of this project is to have a Drupal development environment without installing anything on your desk (except Docker), and to be easy as possible to use.

Requires: docker, git   Category: deprecated, development, docker

✎ Edit

DruDock (2016)

Source:	github.com/4AllDigital/DruDockCli
Drupal:	7, 9

Description:

DruDock is Docker based development, staging and production environment for Drupal websites or PHP apps.

Requires: docker   **Category:** cli, debug, development, docker

✎ Edit

drumkit (2019)

Source: gitlab.com/consensus.enterprises/drumkit
Docs: drumk.it/documentation
Drupal: 9

Description:

Drumkit is a suite of GNU Makefiles and other scripts made to simplify software development, testing and deployment.

Requires: docker   **Category:** ci, cli, debug, development, docker

✎ Edit

Druml (2014)

Source: github.com/georgetown-university/druml
Docs: github.com/georgetown-university/druml
Drupal: 7, 9

Description:

Druml is a Drupal multisite tool that helps to maintain multiple Drupal sites. It has been developed in Georgetown University, which maintains over 250 Drupal websites. Druml can run commands on different servers in parallel.

Requires: cli   Category: building, cli, deployment, deprecated, drush

✎ Edit

Drupal Ansible Tools (2016)

Source: github.com/pjoulot/Drupal-Ansible-Tools
Drupal: 9

Description:

Some Ansible tools to deploy Drupal environment on lxc containers.

Requires: ansible, lxc   Category: cli, containers, deprecated, development, ubuntu

✎ Edit

Drupal API Client (JS) (2022)

Source: github.com/DavideBruner/drupal-api-client
Docs: github.com/DavideBruner/drupal-api-client#readme
Drupal: 7, 9, 10

Description:

A lightweight TypeScript client that provides an object-oriented wrapper around the Drupal.org REST API.

Requires: nodejs, npm   Category: deprecated, drupalorg, js, sdk

✎ Edit

Drupal.org API Client (PHP) (2016)

Source: github.com/hussainweb/drupal-api-client
Docs: github.com/hussainweb/drupal-api-client#readme
Drupal: 7, 9, 10

Description:

A PHP wrapper built on Guzzle for interacting with the Drupal.org API in custom tools and integrations.

Requires: composer, php

Category: drupalorg, sdk

✎ Edit

Drupal Auto Update (2016)

Source: github.com/populist/drupal-auto-update
Drupal: 7, 9

Description:

Automate Drupal core, plugin and theme updates on Pantheon with Terminus, CircleCI, Drush, BackstopJS and Slack.

Requires: cli   Category: cd, ci, debug, deployment, deprecated, testing

✎ Edit

Drupal in AWS with Ansible (2015)

Source: github.com/soccerties/Drupal-AWS-Ansible
Drupal: 9

Description:

This reference architecture provides a set of YAML templates for deploying Drupal on AWS using Amazon VPC, Amazon EC2, Auto Scaling, Elastic Load Balancing (Application Load Balancer), Amazon RDS, Amazon ElastiCache, Amazon EFS, Amazon CloudFront, Amazon Route 53, Amazon ACM with AWS CloudFormation.

Requires: ansible, aws   Category: ci, deployment, deprecated, provisioning, scaffolding

✎ Edit

Drupal Behat (2016)

Source: github.com/nuvoleweb/drupal-behat
Docs: github.com/nuvoleweb/drupal-behat
Drupal: 9

Description:

Nuvole Behat Drupal Extension extends the popular Behat Drupal Extension in order to provide additional features.

Requires: behat, composer   **Category:** behat, testing

✎ Edit

Drupal Check (2019)

Source: github.com/mglaman/drupal-check
Drupal: 9

Description:

Built on PHPStan, this static analysis tool will check for correctness (e.g. using a class that doesn't exist), deprecation errors, and more.

Requires: phpstan   **Category:** cli, debug, testing

✎ Edit

Drupal Code Builder (2006)

	Source: github.com/drupal-code-builder/drupal-code-builder Drupal: 7, 9

Description:

Drupal Code Builder is a system for generating scaffold code for Drupal modules (and other components).This is a library, and has no UI of its own.

Requires: php   **Category:** development, library, scaffolding

✎ Edit

Drupal Code Generator (2015)

	Source: github.com/Chi-teck/drupal-code-generator Drupal: 7, 9

Description:

A command line code generator for Drupal.

Requires: cli   **Category:** cli, development, generator, phar, scaffolding, symfony

✎ Edit

Drupal composer init (2017)

	Source: github.com/hussainweb/drupal-composer-init Docs: github.com/hussainweb/drupal-composer-init Drupal: 7, 9

Description:

This plugin provides a new composer command (drupal-init) which helps in creating new Drupal installations based on composer. Most of the options are very similar to the default composer init command. There are additional options to specify a Drupal core or distro to use and the docroot.

Requires: composer   **Category:** building, cli, scaffolding

✎ Edit

Drupal Critical (2017)

Source: github.com/stefspakman/drupal-critical
Drupal: 7, 9

Description:

Automated generation of Critical CSS for Drupal sites.

Requires: npm   Category: css, deprecated, seo

✎ Edit

---

drupal-debug (2019)

Source: github.com/ekino/drupal-debug
Drupal: 9

Description:

Alternative Kernel for Drupal 8 to improve the Developer eXperience during the development process.

Requires: composer   **Category:** debug, development

✎ Edit

CLI tools for local Drupal development (2022)

Source: github.com/karate/drupal-dev
Docs: github.com/karate/drupal-dev
Drupal: 7, 9

Description:

CLI tools for local Drupal development using Docker and tmux.

Requires: docker, tmux   Category: cli, deprecated, development, docker

✎ Edit

Drupal Docker Lite (2017)

Source: github.com/mortenson/drupal-docker-lite
Drupal: 9

Description:

This project exists because local development in Drupal 8 is just too darn complicated. I wanted a tool that had minimal dependencies and a single command that set up everything for me, so I wrote one!

Requires: docker   Category: cli, deprecated, development, docker

✎ Edit

Drupal Dockerizer (2021)

Source: github.com/jet-dev-team/drupal-dockerizer
Drupal: 9

Description:

A set of Ansible playbooks for spinning up Drupal projects with Docker Compose.

Requires: ansible, composer, git

Category: cd, ci, deprecated, development, docker, testing

✎ Edit

DrupalDriver (2017)

Source: github.com/jhedstrom/DrupalDriver
Drupal: 7, 9

Description:

Provides a collection of light-weight drivers (eg Blackbox, Direct Drupal API bootstrap, Drush) with a common interface for interacting with Drupal.These are generally intended for testing, and are not meant to be API-complete.

Requires: composer, drupal

Category: ci, drivers, testing

✎ Edit

Drupal install CLI (2018)

Source: github.com/awd-studio/drupal-install-cli
Drupal: 7, 9

Description:

Provide a command for installing drupal with drush from the command line.

Requires: cli, composer, drush

Category: cli, development

✎ Edit

Drupal JS Build (2019)

Source: github.com/front/drupal-js-build
Docs: github.com/front/drupal-js-build
Drupal: 9

Description:

Command line to build JS files the way Drupal core does. Just create your JS files as [name].es6.js. When this tool is executed, those files will be compiled by Babel to [name].js. The script files were directly taken from Drupal core codebase and updated to support custom build configurations using the .drupalbuild.js file. The default configuration will match Drupal's default behaviour/convention.

Requires: npm

Category: compile, development

✎ Edit

Drupal Maintainer Release Notes (2022)

Source: github.com/mglaman/drupal-mrn
Docs: github.com/mglaman/drupal-mrn#readme
Drupal: 7, 9, 10

Description:

Generates Drupal.org-ready release notes with automatic contributor recognition and issue grouping for project maintainers.

Requires: http

Category: drupalorg, maintainers, workflow

✎ Edit

Drupal Nginx recipe (2010)

Source:	github.com/perusio/drupal-with-nginx
Drupal:	7, 9

Description:

Nginx configuration for running Drupal

Requires: nginx, php-fpm

Category: deprecated, provisioning, seo, server

✎ Edit

Drupal Operator for Kubernetes (2019)

Source:	github.com/geerlingguy/drupal-operator
Drupal:	9

Description:

This is a Drupal Operator, which makes management of Drupal instances running inside Kuberenetes clusters easy. It was built with the Operator SDK using Ansible Operator.

Requires: kubernetes

Category: deployment, deprecated, docker, kubernetes, provision

✎ Edit

Drupal.org API Component (2015)

Source:	github.com/EclipseGc/drupal-org-api
Docs:	github.com/EclipseGc/drupal-org-api#readme
Drupal:	7, 9, 10

Description:

A PHP component that wraps the Drupal.org REST API for accessing project, user, and issue data.

Requires: composer, php

Category: deprecated, drupalorg, sdk

✎ Edit

Drupal pre-commit hook (2014)

Source:	github.com/andrewmriley/drupal-site-precommit
Drupal:	7, 9

Description:

A Drupal pre-commit hook to help write better code.

Requires: git   **Category:** cli, development, git, precommit

✎ Edit

Drupal Provision (2017)

Source:	github.com/willjackson/drupal-provision
Drupal:	7, 9

Description:

Drupal Provision is a command line tool was created to expedite the process of provisioning a new production environment for a Drupal based website. It can be used to install all the required Linux packages, create an optional development environment, secure all non-production VirtualHosts with basic authentication, and create all needed databases.

Requires: linux   Category: cli, deployment, deprecated, provisioning, testing

✎ Edit

Drupal Code Quality Checker (2017)

Source:	github.com/vijaycs85/drupal-quality-checker
Drupal:	9

Description:

Provides set of libraries to easily setup code quality checks based on GrumPHP for Drupal module/theme/profile.

Requires: composer   Category: cli, debug, deprecated, testing

✎ Edit

Drupal Scaffold (2015)

Source:	github.com/drupal-composer/drupal-scaffold
Docs:	github.com/drupal-composer/drupal-scaffold
Drupal:	9

Description:

Composer Plugin for updating the Drupal scaffold files when using drupal/core. This is a composer plugin for automatically downloading Drupal scaffold files (like index.php, update.php, …) when using drupal/core via Composer.

Requires: composer

Category: building, cli, deployment, deprecated, development, provisioning, scaffolding, testing

✎ Edit

Drupal scaffold Docker (2017)

Source:	github.com/drupal-composer-ext/drupal-scaffold-docker
Docs:	github.com/drupal-composer-ext/drupal-scaffold-docker/blob/8.x/README.md
Drupal:	9

Description:

Composer plugin for automatically downloading pre-configured Docker + Docker Compose scaffold files (like Dockerfile, docker-compose.yml, ...) when using composer with a Drupal specific project.

Requires: composer, docker

Category: deprecated, development, docker, scaffolding, testing

✎ Edit

Drupal SDK (2021)

Source:	gitlab.com/VoidE/drupal-sdk
Docs:	gitlab.com/VoidE/drupal-sdk
Drupal:	9

Description:

The Drupal SDK is a helper package for calling Drupal endpoints, like the JSON:API, in a more efficient and easy way.

Requires: drupal, npm   **Category:** js, jsonapi, npm, sdk

✎ Edit

Acquia Drupal Spec Tool (2018)

Source:	github.com/acquia/drupal-spec-tool
Docs:	dev.acquia.com/blog/a-specification-tool-for-drupal-8-/30/05/2018/19606
Drupal:	9, 10

Description:

This project provides a tool for specifying Drupal architecture details and generating automated tests for them. It consists of one Google Sheet for capturing specification and generating tests from it and the Behat contexts that automate the generated tests.

Requires: behat, cli, composer   **Category:** ci, specifications, testing

✎ Edit

Drupal Test Traits (2017)

Source:	gitlab.com/weitzman/drupal-test-traits
Drupal:	9

Description:

Traits for testing Drupal sites that have user content (versus unpopulated sites).

Requires: composer   Category: cli, debug, deprecated, testing

✎ Edit

Test Drupal Projects (2019)

Source: github.com/thunder/drupal-testing
Drupal: 9

Description:

Use this package to simplify your drupal project testing. This will run all your standard drupal test and additionally check your source code for drupal coding style guidelines. It can be used to locally run those tests, or on CI platforms like travis or in github actions.

Requires: composer   **Category:** ci, development, testing

✎ Edit

Drupal Theme Init (2021)

Source: github.com/SpecbeeLabs/drupal-theme-init
Docs: github.com/SpecbeeLabs/drupal-theme-init#readme
Drupal: 9, 10

Description:

A Yeoman generator that scaffolds modern Drupal themes with sensible defaults and tooling.

Requires: nodejs, npm   **Category:** cli, generator, theming

✎ Edit

drupal_ti (2014)

Source: github.com/LionsAd/drupal_ti
Drupal: 7, 9

Description:

This will make it simple to use Travis CI to test your Drupal modules with simpletest and PHPUnit tests.

Requires: travis   **Category:** ci, debug, testing

✎ Edit

Drupal Tooler (2025)

Source:	github.com/baikho/drupal-tooler
Docs:	github.com/baikho/drupal-tooler#readme
Drupal:	7, 9, 10

Description:

A browser extension that adds quick navigation, search, and helper shortcuts for working across the Drupal.org ecosystem.

Requires: http, javascript

Category: browser, development, drupalorg, workflow

✎ Edit

Drupal Update Script (2023)

Source:	github.com/valicm/drupal-update
Docs:	github.com/valicm/drupal-update#readme
Drupal:	9, 10

Description:

A Bash utility and GitHub Action for updating Drupal core and contributed modules with Composer, including security-only runs.

Requires: cli, composer, php

Category: ci, cli, devops

✎ Edit

Drupal Updater (2023)

Source:	github.com/Metadrop/drupal-updater
Docs:	github.com/Metadrop/drupal-updater#readme
Drupal:	9, 10

Description:

Helper scripts for updating a Drupal project's Composer dependencies with support for security-only workflows.

Requires: cli, composer, php

Category: ci, cli, devops

✎ Edit

Drupal Vim (2013)

Source: github.com/subhojit777/drupal-vim
Drupal: 7, 9

Description:

Vim plugins and settings that will ease writing Drupal code in Vim as an IDE. The settings will also work in graphical Vim (recommended).

Requires: cli, vim   Category: ide, cli, deprecated, development

✎ Edit

Drupal VM (2014)

DRUPAL VM
— ★ —

Source: github.com/geerlingguy/drupal-vm
Docs: docs.drupalvm.com
Drupal: 7, 9

Description:

Drupal VM is A VM for local Drupal development, built with Vagrant + Ansible. This project aims to make spinning up a simple local Drupal test/development environment incredibly quick and easy, and to introduce new developers to the wonderful world of Drupal development on local virtual machines (instead of crufty old MAMP/WAMP-based development).

Requires: ansible, vagrant   Category: debug, deprecated, development, vagrant, vm

✎ Edit

Drupal VM cli (2016)

Source: github.com/opdavies/drupal-vm-cli
Docs: docs.drupalvm.com
Drupal: 7, 9

Description:

A Symfony Console application that manages and customises configuration files for Drupal VM projects.

Requires: ansible, drupalvm, symfony, vagrant   Category: debug, deprecated, development, vagrant, vm

✎ Edit

Drupal with Nginx (2010)

Source: github.com/perusio/drupal-with-nginx
Drupal: 6, 7

Description:

Nginx configuration for running Drupal

Requires: nginx   Category: deprecated, provisioning, seo, server

✎ Edit

Drupal 8 composer template (2016)

Source: github.com/woprrr/drupal8-composer-template
Drupal: 9

Description:

Provide a kickstart template for Drupal 8 projects, managing your site (Dependencies/Configuration) by composer.

Requires: composer   Category: deprecated, development, scaffolding

✎ Edit

Drupal 8 Sprint Box (2015)

Source: github.com/thom8/drupal8-vagrant
Docs: github.com/thom8/drupal8-vagrant
Drupal: 7, 9

Description:

Simple Vagrant config to download and install the latest dev version of Drupal 8 or 7.

Requires: composer, vagrant, virtualbox

Category: debug, development, docker, vagrant, vm

✎ Edit

Drupal 8 utilities & extras (2017)

Source: github.com/tejomayonline/drupal8-utils/
Docs: github.com/tejomayonline/drupal8-utils/tree/master/doc
Drupal: 9

Description:

A collection of bash sciprts to install fresh composer based drupal 8.x site in one hit.

Requires: cli, composer Category: debug, deprecated, development, scaffolding

✎ Edit

Drupal 9 CI (2017)

Source: github.com/Lullabot/drupal9ci
Drupal: 9

Description:

This repository provides the foundation to implement Continuous Integration in a Drupal 8 project using CircleCI, GitLab CI, or Travis CI against a GitHub or GitLab repository.

Requires: cli, composer Category: cd, ci, deprecated, development, testing

✎ Edit

Drupalal (2015)

Source: github.com/activelamp/generator-drupalal
Docs: github.com/activelamp/generator-drupalal
Drupal: 7

Description:

Yeoman generator for building Drupal sites.

Requires: yeoman   Category: deprecated, development, scaffolding

✎ Edit

Jenkins & SonarQube Drupal CI & Static Code Analysis (2014)

Source: github.com/geerlingguy/drupalci-sonar-jenkins
Drupal: 6, 7, 9

Description:

This Vagrant configuration (with Ansible for provisioning) will install Jenkins, PHP, SonarQube and Drupal CI profiles for code analysis (along with a bunch of other required software).

Requires: ansible, vagrant, virtualbox

Category: ci, deprecated, development, testing

✎ Edit

Drupal Console (2013)

Source: github.com/hechoendrupal/drupal-console
Docs: drupalconsole.com/docs/en/
Drupal: 9

Description:

The Drupal CLI. A tool to generate boilerplate code, interact with and debug Drupal.

Requires: cli

Category: cli, debug, deprecated, development, phar, scaffolding, symfony

✎ Edit

Drupal Extension to Behat and Mink (2014)

Source: github.com/jhedstrom/drupalextension
Docs: behat-drupal-extension.readthedocs.io
Drupal: 6, 7, 9

Description:

The Drupal Extension is an integration layer between Behat, Mink Extension, and Drupal. It provides step definitions for common testing scenarios specific to Drupal sites.

Requires: behat, composer, mink

Category: ci, debug, testing

✎ Edit

DrupalGap (2012)

Source: github.com/acquia/blt
Docs: docs.drupalgap.org
Drupal: 7, 9

Description:

An application development kit for Drupal websites. Build custom apps for Drupal 7 and 8, with one set of code, and then deploy them to a wide range of app stores, devices and browsers.

Requires: phonegap   **Category:** headless, mobile, sdk

✎ Edit

Drupalizer (2015)

Source: github.com/sfl-drupal/drupalizer
Drupal: 7, 9

Description:

Drupalizer is a Fabric script on top of Docker and tightly integrated with Drush and Drupal that provides the developer high-level tasks to manage the local development environment.

Requires: docker, drush, fabric   Category: building, cli, deployment, deprecated, provisioning, testing

✎ Edit

Drupal JS API Docs (2023)

Source: drupaljs.net
Docs: drupaljs.net
Drupal: 9, 10

Description:

Automatically generated JavaScript API documentation for Drupal 8, 9, and 10 using JSDoc.

Requires: http   **Category:** drupal-core, js

✎ Edit

DrupalPod (2021)

Source:	github.com/shaal/DrupalPod
Docs:	github.com/shaal/DrupalPod
Drupal:	9

Description:

This project allows you to work on Drupal core contributions with a familiar setup of a 'normal' Drupal website using the online IDE Gitpod.io and DDEV. No computer is needed because it is all running in the cloud.

Requires: gitpod **Category:** development, drupal-core, gitpod, gui, ide

✎ Edit

drupalQA (2018)

Source:	github.com/hussainweb/drupalqa
Drupal:	7, 9

Description:

Docker image providing static analysis tools for Drupal and PHP. This is based on the comprehensive PHPQA image and adds Drupal specific sniffs and PAReview.

Requires: docker **Category:** code-quality, docker, qa, testing

✎ Edit

Drupal RC (2017)

Source:	github.com/Chi-teck/drupalrc
Docs:	github.com/Chi-teck/drupalrc
Drupal:	9

Description:

Useful Bash functions for Drupal development.

Requires: cli, drush **Category:** cli, development

✎ Edit

Drupalship (2023)

Source: github.com/colorfield/drupalship
Docs: github.com/colorfield/drupalship#readme
Drupal: 9, 10

Description:

A curated Drupal onboarding and documentation site that highlights essential tools, guides, and learning resources.

Requires: http   **Category:** development, maintainers, workflow

✎ Edit

Drupalstack (2014)

Source: github.com/adminteractive/drupalstack
Drupal: 9

Description:

Docker based development environment for Drupal 8 using only official Docker images.

Requires: docker   Category: deprecated, development, docker, testing

✎ Edit

Druposer (2016)

Source: github.com/dsdobrzynski/druposer
Drupal: 7, 9

Description:

A framework for creating a Drupal project using composer.

Requires: composer   Category: building, cli, deprecated, scaffolding

✎ Edit

Drupsible (2015)

Source: github.com/mbarcia/drupsible-project
Docs: github.com/mbarcia/drupsible-project/blob/master/README.md
Drupal: 6, 7, 9

Description:

Drupsible is a DevOps tool for Drupal continuous delivery, based on Ansible. By using Drupsible, your team will be able to provision, import, integrate, deploy and maintain Drupal websites across complex infrastructures using a simple set of YAML configuration files.

Requires: ansible, vagrant

Category: deployment, devops, provisioning, scaffolding, vagrant, vm

✎ Edit

drupwn (2018)

Source: github.com/immunIT/drupwn
Docs: github.com/immunIT/drupwn/blob/master/README.md
Drupal: 7, 9

Description:

Drupwn claims to provide an efficient way to gather drupal 7.x and 8.x information.

Requires: python

Category: deprecated, development, security

✎ Edit

DRUSCAN (2025)

Source: github.com/droptica/druscan
Drupal: 8, 9, 10, 11

Description:

Automated technical audit for Drupal sites by Droptica that collects structured data about modules, security, performance, and configuration.

Requires: ddev, jq, lighthouse, nodejs, pa11y

Category: auditing, cli, security, testing

✎ Edit

Drush (2007)

Source: github.com/drush-ops/drush
Docs: docs.drush.org
Drupal: 6, 7, 9

Description:

Drush is a command line shell and Unix scripting interface for Drupal. Drush core ships with lots of useful commands for interacting with code like modules/themes/profiles. Similarly, it runs update.php, executes sql queries and DB migrations, and misc utilities like run cron or clear cache. Drush can be extended by 3rd party commandfiles.

Requires: cli   **Category:** cli, debug, development, drush

✎ Edit

Drutiny (2016)

Source: github.com/seanhamlin/drutiny
Docs: seanhamlin.github.io/drutiny/
Drupal: 7, 9, 10

Description:

A generic Drupal site auditing and optional remediation tool.

Requires: cli, composer **Category:** auditing, cli, drush, symfony, testing

✎ Edit

DruxtJS (2020)

Source: github.com/druxt/druxt.js
Docs: druxtjs.org/guide
Drupal: 9

Description:

Druxt is a framework for building Fully Decoupled Drupal and Nuxt.js applications and sites. It allows you to leverage the content modelling and management power of Drupal, and build elegant user experiences with Nuxt.js.

Requires: javascript, nodejs, nuxtjs   **Category:** cms, nuxtjs

✎ Edit

Drupal on Elastic Beanstalk (2016)

	Source: github.com/awslabs/eb-php-drupal
	Drupal: 9

Description:

Configuration files and instructions for installing Drupal securely and running it in a load balanced AWS Elastic Beanstalk environment with an EFS file system for shared assets.Use the EB CLI to create an Elastic Beanstalk environment with an attached RDS DB and EFS file system to provide Drupal with a MySQL database and shared storage for uploaded files.

Requires: cli   Category: aws, cli, database, deployment, deprecated, testing

✎ Edit

Expresso PHP (2016)

	Source: github.com/expresso-php/expresso-php
	Drupal: 9

Description:

This is a fast and simple Docker setup for all your PHP development. Quick but not dirty.

Requires: docker   Category: deprecated, development, docker

✎ Edit

Fabalicious (2014)

	Source: github.com/factorial-io/fabalicious
	Docs: factorial-io.github.io/fabalicious
	Drupal: 7, 9

Description:

Fabalicious uses a configuration file with a list of hosts and ssh and optionally tools like composer, drush, git, docker or custom scripts to run common tasks on remote machines. It is slightly biased to drupal-projects but it works for a lot of other types of projects.

Requires: fabric   Category: building, cli, deployment, deprecated, provisioning, testing

✎ Edit

Fepper for Drupal (2015)

Source: github.com/electric-eloquence/fepper-drupal
Drupal: 7, 9

Description:

A frontend prototyper tool for rapid prototyping of Drupal websites.

Requires: npm   **Category:** development, theming

✎ Edit

Fetcher (2011)

Source: github.com/tizzo/fetcher
Docs: fetcher.readthedocs.io
Drupal: 7, 9

Description:

Fetcher is a Drush extension that automates the process of provisioning a Drupal site on a local development environment or a server. This includes setting up the Drupal root, fetching the code (generally from a VCS), creating a database for the site and a user with the necessary privileges to manage it, updating permissions, creating symlinks, setting up server configuration files like Apache's virtual hosts, and generating drush alias files for your convenience. In addition, fetcher supports post installation tasks that can be run after a site is setup.

Requires: docker   **Category:** debug, development, docker, drush, provisioning

✎ Edit

Flight deck (2017)

Source: github.com/ten7?q=flightdeck
Docs: flightdeck.ten7.com
Drupal: 6, 7, 9

Description:

Flight Deck is a set of Docker containers for local Drupal development. It is lightweight, simple, and Docker-native, allowing you to stand up a local development environment quickly after installing Docker.

Requires: docker   **Category:** development, docker, testing

✎ Edit

Generator docker drupal 8 (2015)

Source: github.com/bezhermoso/generator-docker-drupal-8
Drupal: 9

Description:

Yeoman generator for Drupal 8.x development.

Requires: docker, vagrant, virtualbox, yeoman

Category: debug, deprecated, development, generator, vagrant, vm

✎ Edit

Docker4Drupal Generator (2017)

Source: github.com/pauloamgomes/generator-docker4drupal
Drupal: 7, 9

Description:

Yeoman generator for docker4drupal stack

Requires: docker, yeoman

Category: debug, deprecated, development, generator, vm

✎ Edit

---

mc-d8-theme (2016)

Source: github.com/mediacurrent/theme_generator_8
Docs: github.com/mediacurrent/theme_generator_8/blob/master/README.md
Drupal: 9

Description:

Yeoman generator for Drupal Themes - lets you quickly set up a Drupal 8 theme with sensible defaults and best practices.

Requires: yeoman

Category: debug, deprecated, development, generator

✎ Edit

Gitpod Drupal workspace (2021)

Source: github.com/theodorosploumis/gitpod-drupal-workspace
Docs: github.com/theodorosploumis/gitpod-drupal-workspace
Drupal: 9

Description:

An opinionated Docker image you can use with Gitpod.io. Focused on Drupal 8+ development. Includes ddev, lando, composer 2.x and more.

Requires: gitpod   Category: debug, development, deprecated, docker, gitpod, ide

✎ Edit

Gizra drupal lamp (2016)

Source: github.com/Gizra/drupal-lamp
Drupal: 9

Description:

This is a base LAMP docker file. The docker container is based on PHP 5.6-apache or php7, and have: Drupal, Apache2, MySQL, git, Composer, NodeJS, zip, vim, Java jdk, ruby and rubygems, wget, Solr.

Requires: docker   Category: cli, debug, deprecated, development, docker

✎ Edit

GoComposer (2018)

Source: github.com/WebKings-ca/gocomposer
Drupal: 9

Description:

GoComposer is an all in one solution to update existing Drupal 8 sites to the latest Fully Composer Managed template. It takes the template found in drupal-project and automagically applies it to ypur site.

Requires: composer   Category: cli, deprecated, development

✎ Edit

Grunt drupal tasks (2014)

Source: github.com/phase2/grunt-drupal-tasks
Drupal: 7, 9

Description:

A Grunt plugin to automate Drupal 7 and Drupal 8 build and testing tasks.

Requires: grunt   Category: ci, building, cli, deployment, deprecated, testing, workflow

✎ Edit

Gulp for Drupal (2017)

Source: github.com/SyneticNL/Gulp-for-Drupal
Docs: github.com/SyneticNL/Gulp-for-Drupal
Drupal: 7, 9

Description:

This gulp setup features a full Drupal Gulp workflow for proccesing your SCSS files, running browsersync, linting SCSS and JavaScript and several other tasks. This Gulp setup is made to work with Drupal (tested with Drupal 7 & 8) but can also be configured to work with any other project. The setup is extremely customisable by editing the gulpconfig.json.

Requires: npm   Category: deprecated, development, gulp, theming

✎ Edit

Gulp Drupal Stack (2017)

Source: github.com/ovh/gulp-drupal-stack
Docs: gulp-drupal-stack.readthedocs.io
Drupal: 9

Description:

This stack core is to be included in your main project and sets up many Gulp tasks that can work in many flexible ways by passing in different config objects, which can be based off of gulpfile.default.yml (and is merged with).

Requires: npm   **Category:** development, gulp, theming

✎ Edit

Humpback (2017)

Source: github.com/humpbackdev
Docs: github.com/humpbackdev/humpback
Drupal: 9

Description:

A Docker-based environment that makes it easy to build Drupal 8 sites. This tool integrate several utilities that you can use in your project, among them varnish, solr, memcached, ngrok, mailhog, drush, drupal console and some others that will make your life easier when developing with Humpback.

Requires: ahoy, docker, docker-compose

Category: cli, development, docker, scaffolding

✎ Edit

Drupal on Kubernetes (2017)

Source: github.com/IBM/drupal-on-kubernetes-sample
Docs: developer.ibm.com/patterns/run-drupal-website-on-kubernetes/
Drupal: 9

Description:

Code Pattern to setup a Drupal site using Kubernetes and Postgres. By splitting out the services into containers, we have the ability to leverage the power of Kubernetes.

Requires: docker, kubernetes

Category: ci, debug, deprecated, testing

✎ Edit

---

jDrupal (2014)

Source: github.com/signalpoint/jDrupal
Docs: github.com/signalpoint/jDrupal/tree/8.x-1.x/docs
Drupal: 7, 9

Description:

A JavaScript Library and API for Drupal Applications.

Requires: javascript

Category: deprecated, development

✎ Edit

Kalabox (2016)

Source: github.com/kalabox/kalabox
Drupal: 6, 7, 9

Description:

Faster local development for Drupal, WordPress, and beyond. Kalabox is the easiest way to develop websites and get them live. Get rid of the drudgery and have more fun!

Requires: docker   Category: cli, deprecated, development, docker

✎ Edit

Lagoon (2017)

Source: github.com/amazeeio/lagoon
Docs: lagoon.readthedocs.io/
Drupal: 7, 9

Description:

Lagoon solves what developers are dreaming about: A system that allows developers to locally develop their code and their services with Docker and run the exact same system in production. The same Docker images, the same service configurations and the same code.

Requires: linux, own-server   **Category:** hosting

✎ Edit

Lando (2017)

Source: github.com/lando/lando
Docs: docs.lando.dev
Drupal: 6, 7, 9

Description:

Lando is a free, open source and cross-platform local development environment and DevOps tool built on Docker container technology and developed by Tandem. It is designed to work with most major languages, frameworks and services and to provide an easy way for users to specify simple or complex development requirements for their projects.

Requires: docker   **Category:** cli, debug, development, docker, testing

✎ Edit

Drupal 8 Scaffolding (2016)

Source:	github.com/LastCallMedia/Drupal-Scaffold
Docs:	github.com/LastCallMedia/Drupal-Scaffold
Drupal:	9

Description:

This is a boilerplate Drupal 8 build that bundles some standard tools to make it a good starting point for an enterprise scale Drupal build. It is conceptually similar to drupal-composer/drupal-scaffold, but it has a much simpler (and more manual) Composer setup, and includes additional tools.

Requires: docker, docker-compose

Category: building, cli, deployment, development, provisioning, scaffolding, testing

✎ Edit

Localdev (2019)

Source:	pantheon.io/localdev
Docs:	pantheon.io/docs/localdev
Drupal:	9

Description:

Localdev by Pantheon makes it easy to develop your sites locally with the Pantheon workflow.

Requires: macos

Category: deprecated, development, gui

✎ Edit

M8s (2017)

Source:	github.com/previousnext/m8s
Docs:	github.com/previousnext/m8s/tree/master/docs
Drupal:	9

Description:

M8s is a CLI and API for building temporary environments in Kubernetes (eg you want a real environment to run automated or manual tests that are ephemeral).

Requires: docker, kubernetes

Category: ci, debug, deprecated, testing

✎ Edit

Mediacurrent Theme Generator (2023)

Source: github.com/mediacurrent/theme_generator_10
Docs: github.com/mediacurrent/theme_generator_10#readme
Drupal: 9, 10

Description:

A Yeoman generator from Mediacurrent that scaffolds Drupal themes with modern tooling and best practices.

Requires: nodejs, npm   **Category:** cli, generator, theming

✎ Edit

Next.js for Drupal (2021)

Source: github.com/chapter-three/next-drupal
Docs: next-drupal.org/docs
Drupal: 9

Description:

Next.js + Drupal for Incremental Static Regeneration and Preview mode (works with JSON:API and GraphQL).

Requires: javascript, nodejs   **Category:** cms, nextjs

✎ Edit

OpenDevShop (2013)

Source: github.com/opendevshop/devshop
Docs: docs.opendevshop.com
Drupal: 9

Description:

DevShop is a 'cloud hosting' system for Drupal. DevShop makes it easy to host, develop, test and update drupal sites. It provides a front-end built in Drupal (Devmaster) and a back-end built with drush, Symfony, and Ansible.

Requires: ansible   Category: aegir, deprecated, hosting, multisite, paas

✎ Edit

ORCA (2018)

Source:	github.com/acquia/orca
Docs:	github.com/acquia/orca/tree/develop/docs
Drupal:	9

Description:

ORCA (Official Representative Customer Application) is a tool for testing a company Drupal-adjacent software packages. It ensures their cross compatibility and correct functioning by installing all of them together into a realistic, functioning, best practices Drupal build and running automated tests and static code analysis on them. Its guiding design principle is to use company packages as a customer would. It installs the latest recommended versions via composer and performs no manual setup or configuration.

Requires: composer, sqlite

Category: cd, ci, cli, development, infrastructure, testing

✎ Edit

Outrigger (2017)

Source:	github.com/phase2?utf8=%E2%9C%93&q=outrigger-
Docs:	docs.outrigger.sh
Drupal:	7, 9

Description:

Outrigger is a set of developer tools that makes development, integration, staging and production environments simple, portable and, most importantly, CONSISTENT across team members and environments.

Requires: docker   **Category:** development, docker, testing

✎ Edit

Parrot (2013)

Source:	github.com/computerminds/parrot
Docs:	github.com/computerminds/parrot/wiki
Drupal:	7, 9

Description:

Parrot is a utility VM for Drupal development. It's not your development environment, but it's the complex, hard to set up, servers you'll need.

Requires: vagrant   Category: debug, deprecated, development, vagrant, vm

✎ Edit

Phabalicious (2013)

Source: github.com/factorial-io/phabalicious
Docs: factorial-io.github.io/phabalicious/guide.html
Drupal: 9

Description:

Phabalicious is the successor of the python tool fabalicious, a deployment helper based on fabric. Phabalicious is a complete rewrite in PHP using the symfony framework. It uses the same fabfile.yaml as fabalicious.

Requires: php   **Category:** cd, ci, cli, deployment, scaffolding

✎ Edit

Phing Drupal Tests (2019)

Source: github.com/DoghouseMedia/phing-drupal-tests
Drupal: 9

Description:

A collection of automated Drupal testing targets for Phing.

Requires: composer,   Category: ci, deprecated, phing, testing
phing

✎ Edit

---

phingdrushtask (2013)

Source: github.com/drupol/phingdrushtask
Docs: github.com/drupol/phingdrushtask/
Drupal: 6, 7, 9

Description:

A Drush task for Phing. This task enable usage of Drush commands in Phing build scripts. Phing provides tools for usual tasks for PHP projects (phplint, jslint, VCS checkouts, files copy or merge, packaging, upload, etc.). Integration of Drush in Phing is particularly useful when building and testing Drupal projects in a continuous integration server such as Jenkins, Travis or Continuous PHP.

Requires: composer,   Category: ci, building, deployment, deprecated,
phing   provisioning, testing

✎ Edit

PHP conventions (2019)

Source: github.com/drupol/php-conventions
Drupal: 9

Description:

A developer tool which provides a pre-defined GrumPHP configuration tailored specifically for PHP development.

Requires: composer, grumphp

Category: devops, linting, testing

✎ Edit

phpocker (2015)

Source: github.com/blueoakinteractive/phpocker
Drupal: 6, 7, 9

Description:

Yeoman generator to provision a docker compose stack for Drupal development.

Requires: docker, yeoman

Category: debug, deprecated, development, generator, provisioning

✎ Edit

PHPStan Drupal (2018)

Source: github.com/mglaman/phpstan-drupal
Drupal: 9

Description:

Extension for PHPStan to allow analysis of Drupal code.

Requires: phpstan

Category: cli, debug, testing

✎ Edit

Precip (2015)

precip

Source:	github.com/clwdev/precip
Drupal:	6, 7, 9

Description:

Precip is a Vagrant-based all-inclusive local development environment for building Drupal Sites you'll eventually be pushing up to one of several wonderful Drupal Cloud Hosting Services. It's initially being built against Acquia Cloud, but may eventually support other similar services.

Requires: vagrant   Category: debug, deprecated, development, vagrant, vm

✎ Edit

Pygmy (2017)

Source:	github.com/amazeeio/pygmy
Docs:	pygmy.readthedocs.io
Drupal:	7, 9

Description:

pygmy is the single tool needed to get the local amazee.io Docker Drupal Development Environment running on your Linux based system. It built to work with Docker for Mac! (quite a lot for such a small whale 🐳)

Requires: linux, macos, ruby   **Category:** deployment, development, testing

✎ Edit

Samos123 Docker image (2014)

Source:	github.com/samos123/docker-drupal
Drupal:	7

Description:

This image contains the latest stable Drupal 7-release. It will automatically setup the database and install a default site. The image doesn't contain a database so you have to create a seperate database container (which is no effort if you use the provided configuration for docker-compose) and link this container or pass the database information of a MySQL- or Postgres-host.

Requires: docker   Category: debug, deprecated, development, docker

✎ Edit

Shrubs (2023)

Source: github.com/kanopi/shrubs
Drupal: 10

Description:

Common support commands for Cypress when interacting with Drupal.

Requires: composer, javascript, nodejs

Category: cypress, javascript, testing

✎ Edit

Simple Drupal Docker Toolset (2015)

Source: github.com/reinier-vegter/Simple-Drupal-Docker-Toolset
Drupal: 6, 7, 9

Description:

With this toolset, you can install docker and easily fire up any existing Drupal (or php) webroot in 2 seconds.

Requires: docker

Category: cli, debug, development, docker

✎ Edit

Stonehenge (2019)

Source: github.com/druidfi/stonehenge
Docs: github.com/druidfi/stonehenge
Drupal: 7, 9

Description:

Local development environment toolset on Docker supporting multiple projects (Drupal, Wordpress, Laravel, Ghost, Hugo and more).

Requires: docker, make

Category: cli, debug, development, docker, testing

✎ Edit

Switchboard (2014)

Source: github.com/fluxsauce/switchboard
Docs: fluxsauce.github.io/switchboard/
Drupal: 6, 7, 9

Description:

Switchboard is a application for coordinating between local environments and third-party hosts. Switchboard gets information about remote sites, sets up local sites, and can be used to synchronize content between the local and remote. Switchboard uses Drush for validation and input. All commands can respond with Drush format (default), or with JSON output using option --json. Switchboard currently supports operations on both Acquia and Pantheon sites.

Requires: composer, drush, git

Category: cli, deployment, deprecated, development, drush

✎ Edit

Task Runner (2017)

Source: github.com/openeuropa/task-runner
Drupal: 7, 9

Description:

PHP task runner based on Robo, focused on extensibility.

Requires: composer, docker, docker-compose

Category: cd, ci, deployment, devops, provisioning, robo

✎ Edit

Terra (2015)

Source: github.com/terra-ops
Docs: terra.readthedocs.io
Drupal: 7, 9

Description:

Terra is a suite of tools for the purpose of quickly and easily standing up web apps with Docker. It is designed to be as simple as possible for developers, while being powerful enough to use in production at scale. With Terra, all you care about is your site's code. Stop wasting time setting up environments. Let terra and docker do all the work for you.

Requires: docker

Category: aegir, cli, development, docker, production, testing

✎ Edit

Tokaido (2018)

Source: github.com/ironstar-io/tokaido
Docs: github.com/ironstar-io/tokaido#readme
Drupal: 9, 10

Description:

A zero-configuration local development environment for Drupal powered by Docker and a friendly CLI.

Requires: cli, docker, docker-compose

Category: cli, deprecated, development, docker

✎ Edit

Tome (2018)

Source: github.com/drupal-tome
Docs: tome.fyi/docs
Drupal: 9

Description:

A static site generator lovingly crafted with Drupal 8.

Requires: composer, drush

Category: deployment, development, generator, static-sites

✎ Edit

Turbo Drupal (2023)

Source: github.com/droptica/turbo-drupal
Docs: github.com/droptica/turbo-drupal#readme
Drupal: 9, 10

Description:

A Drupal project template that pairs DDEV-based local development with best-practice configuration and deployment tooling.

Requires: docker

Category: development, docker, scaffolding

✎ Edit

Undine (2014)

Source:	bitbucket.org/stevens_devops/undine
Docs:	bitbucket.org/stevens_devops/undine
Drupal:	6, 7, 9

Description:

Undine is a cross-platform development environment for Drupal developers, inspired by (and intended to emulate) the Acquia Cloud hosting platform. Where prior versions of Undine used Vagrant, the current incarnation leverages Docker to provide improved speed, stability and cross-platform compatibility.

Requires: docker   **Category:** cli, development, docker

✎ Edit

Valkyrie (2014)

Source:	github.com/GetValkyrie/valkyrie
Docs:	www.getvalkyrie.com
Drupal:	6, 7, 9

Description:

Valkyrie is a free git-based development and maintenance stack for hardcore Drupal developers. It's built with tools you know and love to make your life easier. We've fine-tuned it and tested it in production with a growing team of developers, and across hundreds of sites.

Requires: drush, vagrant, virtualbox   Category: aegir, debug, deprecated, development, drush, production

✎ Edit

Vagrant Drupal 8 (2014)

Source:	github.com/nickschuch/vd8
Docs:	github.com/nickschuch/vd8
Drupal:	9

Description:

The VD8 project has been created to make sure developers have an easy method for boostrapping a local Drupal 8 development environment.

Requires: composer, vagrant, virtualbox   Category: debug, deprecated, development, vagrant, vm

✎ Edit

vdd (2013)

	Source: www.drupal.org/project/vdd Docs: www.drupal.org/node/2008758 Drupal: 6, 7, 9

Description:

Vagrant Drupal Development (VDD) is fully configured and ready to use development environment built with VirtualBox, Vagrant, Linux and Chef Solo provisioner. VDD is virtualized environment, so your base system will not be changed and remain clean after installation. You can create as many environments as you wish without any consequences.

Requires: chef, vagrant, virtualbox   Category: debug, deprecated, development, vagrant, vm

✎ Edit

Vite Plugin Twig Drupal (2023)

	Source: github.com/larowlan/vite-plugin-twig-drupal Docs: github.com/larowlan/vite-plugin-twig-drupal#readme Drupal: 9, 10

Description:

A Vite plugin that renders Drupal-flavoured Twig templates so Storybook and modern front-end tooling work with Drupal themes.

Requires: nodejs, npm   **Category:** frontend, js, theming

✎ Edit

Vlad (2013)

	Source: github.com/hashbangcode/vlad Docs: vlad-docs.readthedocs.io Drupal: 7, 9

Description:

Vagrant LAMP Ansible Drupal. A Drupal development platform in a box, with everything you would need to develop Drupal websites.

Requires: ansible, vagrant   Category: debug, deprecated, development, vagrant, vm

✎ Edit

Vortex (2017)

Source: github.com/drevops/vortex
Docs: github.com/drevops/vortex#readme
Drupal: 9, 10

Description:

A Drupal project template that ships containerized local environments, automated testing, and CI/CD scaffolding so teams can start fast.

Requires: cli, composer, docker, docker-compose **Category:** cd, ci, deployment, devops, scaffolding

✎ Edit

Wadmiraal Docker Drupal (2015)

Source: github.com/wadmiraal/docker-drupal
Docs: github.com/wadmiraal/docker-drupal
Drupal: 7, 9

Description:

Quick and easy to use Docker container for your local Drupal development. It contains a LAMP stack and an SSH server, along with an up to date version of Drush. It is based on Debian Jessie.

Requires: docker Category: debug, deprecated, development, docker

✎ Edit

Warden server (2014)

Source: github.com/teamdeeson/warden
Drupal: 6, 7, 9

Description:

Warden is for busy people managing multiple websites. It provides a central dashboard for reviewing the status of every website, highlighting those with immediate issues which need resolving. On the roadmap is a pluggable system allowing Warden to be used flexibly for any website which has a supporting connector module.

Requires: composer, mongodb, own-server Category: deprecated, monitoring, paas, security, server

✎ Edit

WASM Drupal (2023)

Source: github.com/mglaman/wasm-drupal
Docs: github.com/mglaman/wasm-drupal#readme
Drupal: 10

Description:

Runs Drupal inside WebAssembly for browser-based demos, experiments, and education.

Requires: http   **Category:** development, drupal-core, testing

✎ Edit

Waterwheel Swift SDK (2010)

Source: github.com/kylebrowning/waterwheel.swift
Drupal: 7, 9

Description:

Waterwheel makes using Drupal as a backend with iOS, macOS, tvOS, or watchOS enjoyable by combining the most used features of Drupal's API's in one SDK. - Formerly known as Drupal iOS SDK.

Requires: xcode, ios   **Category:** rest, swift

✎ Edit

Web Starter Kit (2014)

Source: github.com/forumone/generator-web-starter
Docs: github.com/forumone/generator-web-starter
Drupal: 7, 9

Description:

The Web Starter Kit is a yeoman generator that allows you to create a Drupal, AngularJS or Wordpress project, add a Drupal theme like the gesso theme and add common preconfigure common utilities like grunt tasks, capistrano or puppet.

Requires: yeoman   Category: deprecated, development, generator, scaffolding

✎ Edit

Webhaven (2025)

Source:	webhaven.io
Docs:	webhaven.io/blog
Drupal:	9, 10

Description:

A hosted Drupal project foundation that bundles best-practice configuration, automation, and documentation so teams can launch quickly.

Requires: http   **Category:** development, provisioning, scaffolding

✎ Edit

Yeoman drupal frontend (2017)

Source:	github.com/stefspakman/yeoman-drupalfrontend
Drupal:	7, 9

Description:

A Yeoman generator to scaffold a Drupal theme and https://github.com/SyneticNL/Gulp-for-Drupal.

Requires: npm   Category: deprecated, development, gulp, theming
